Utkarsh Misra

Data Science Associate

utkarshmisra1912@gmail.com | +91 6394488260 | Bengaluru | linkedin.com/in/utkarsh-misra | Github

Education

CHRIST (Deemed to be University) — Bengaluru, Karnataka
M.Sc. in Data Science — Avg: 77.63% — Jul 2024 – May 2026

University of Lucknow — Lucknow, India
B.Sc. in Statistics — Percentage: 74.67% — 2020 – 2023

Experience

DataNeurus Pvt. Ltd. — Bengaluru, Karnataka
Data Science Intern — Jan 2026 – Jun 2026

- Engineered production-grade AI agent workflows with **LangChain** and **LangGraph**, including tracing, logging, and low-latency code optimization.
- Onboarded across ML, Deep Learning, Computer Vision, NLP, Generative AI, and RAG pipelines; pitched visualization features adopted into the product roadmap.
- Presented a knowledge session on Data Pipelines and Apache Airflow as part of the company's internal training program Amplify, delivering to the full data science team including senior data scientists.

Skills

Programming	Python, R, SQL, Java
AI/ML Frameworks	LangChain, LangGraph, AI Agents, RAG Pipelines, Generative AI
ML & Modeling	Random Forest, GBM, XGBoost, Time Series, Regression, Feature Engineering, Econometrics
Data & Databases	NumPy, Pandas, EDA, SQL, MongoDB, Excel
Visualization	Matplotlib, Seaborn, Streamlit, Plotly
Tools & Platforms	Git, GitHub, MS Office

Research and Projects

Multi-Tool AI Agent Workflows — *Python, LangChain, LangGraph, RAG, SQL, SQLite*

- Gained hands-on experience designing multi-tool agentic systems integrating structured data retrieval, RAG pipelines, ML inference, and dynamic visualization with automated reporting.

Monte Carlo Simulation: Hybrid Pipeline Research — *Python, Monte Carlo, LHS, Copula Modelling*

- Investigated hybrid simulation approaches combining LHS, Copula modelling, Regime Switching, and Discrete Event Simulation as improvements over conventional Monte Carlo frameworks.

Mars Terrain Classification | **IEEE MISSF 2026** – ***Published*** — *Python, PyTorch, ResNet18/50, EfficientNet-B3*

- Benchmarked three CNN architectures on 6,691 Mars rover images across 24 classes; EfficientNet-B3 achieved **77.47%** accuracy.

Quantization for Energy-Efficient AI | **Conference** – ***Selected*** — *Python, PyTorch, ResNet18, INT8 QAT, FP16*

- INT8 QAT on ResNet18 achieved **88.97%** accuracy with 57.9% lower energy use than FP32 and a 2.6× smaller carbon footprint.

Publications and Achievements

- **IEEE MISSF 2026:** Authored and presented CNN-based Mars terrain classification research.
- **Tilasto'25:** Prize recipient at the National Inter-College Statistics Fest in Statistical Game Show events.
- **Leadership:** Organised an Industrial Visit to Mysore for the M.Sc. Data Science cohort, managing end-to-end logistics.
